

Why Turn Off Your Pop-up Blocker

Sometimes when running MyItLab you run into problems created by your pop-up blocker and turning them off eliminates the problem, i.e., a page won't open when you click the page's link.

I say "***them***" because you may have a number of blockers on your system. Internet Explorer has one and most toolbars have them. You must turn each one of them off. You may try turning them off one at a time to see if one of them is causing the problem.
