1. (2 pts) Suppose the String s has the value “HHHHHHHHheeeeeeello”. Write two lines of code which will convert s to the String “Hello”.

2. (2 pts) What is a regular expression that will match the String “<a href="80%," width="300%" HIJKJ:””?

3. (2 pts) True/False _____ A Vector’s size must be declared when it is created.

4. (2 pts) Given that the first element in a Vector, v, is at position 0, and that the method elementAt(int) returns the element in v at the position indicated by the int, write one line of code which will change the last element in the Vector to be the same thing as the first element in the Vector.

5. (2 pts) Suppose we have an array of positive integers, numbers. Use a vector to sort out this array of integers and print them out. (Recall that the integers are positive). Assume you have at your disposal the method max(int[] array) which will return the maximum integer in an array, and the method display(String[] array) which will display all elements of a String array exception “0”.
