1. (2 pts) ________________ returns the URL of the .class file of an applet, and
_______________ returns the URL of the .html file that loaded the applet.

2. (2 pts) In order to load an audioclip in an application we can use the method ________________
from the Applet class which accepts a parameter of type ________________.

3. (2 pts) A ________________ has an optional label and any number of these can be selected at one
time, whereas in a group of ________________ only one can be selected at a time.

4. (2 pts) The components in question 3 can cause an ________________ to occur which we can detect
and act on by implementing the ________________ interface.

5. (2 pts) Suppose we have an array of AudioClips loaded in an application in an array named clips. What
will happen if the following lines are the last two in the application and we interpret the program? Given the
examples you have seen, how many sounds would you expect to play?

```java
for (int counter=0; counter<clips.length; counter++)
    clips[counter].play();
System.exit(0);
```
