CIS 121 - Quiz 4 - Friday, June 11, 2004

Name: _________________________________ J Number: ________________________________

1. (2 pts) An applet’s upper-left corner is at coordinates (_______) and the width of the applet can be found through the method called ______________________.

2. (2 pts) Suppose we have a String reference called s. What piece of code would concatenate the first character in the String together with the last character in the String?

3. (2 pts) In order to place components on a JApplet, we first make the method call ______________________ to give a reference to the area where components will be placed, and with this reference we can specify that no layout manager is to be used with the method call ______________________.

4. (2 pts) True/False _____ We can create an instance of a Graphics object with a constructor.

5. (2 pts) What is printed by the following code? Explain.

   String s = “Hello”;
s.substring(0,1);
s = s.substring(0,5) + “;Hello”;
String[] temp = s.split(“;”);
s.substring(0,5);
System.out.println(s + “ ” + temp.length);
